

NEIGHBORHOOD CODES

Neighborhood codes are developed for internal use within the Auditor's Office and are subject to periodic modification or revision in order to improve their utility.

For most users of the Auditor's Office web-based Property Search and/or Sales search. A search based upon tax district and/or property class code is the most efficient and effective search method for those wishing to use the neighborhood code in their search. The following guidance may prove useful:

When searching for residential parcels based upon neighborhood codes, please note that, in order to get all of the residential parcels within a particular city, village, or township, it may be necessary to search using numbers from both the standard neighborhood and default neighborhood lists, which follow. (For example, to get all residential parcels in tax district 07, one would have to search for 0704 and 9075.)

STANDARD NEIGHBORHOODS – The first two digits of the Neighborhood Code reflect the Tax District in which the parcels are located. These neighborhoods include residential parcels within a particular portion of that Tax District that are generally contiguous to each other and have similar characteristics related to value.

DEFAULT NEIGHBORHOODS - The second and third digits of the Neighborhood Code reflect the Tax District in which the parcels are located. Neighborhoods ending in 1 consist of agricultural parcels, both CAUV and non-CAUV. Neighborhoods ending in 5 are residential neighborhoods, and include all residential parcels within the Tax District that do not belong to a Standard Neighborhood within that District of generally-contiguous parcels with similar characteristics.
